Project Briefing & Grant Proposal: MortgageOS™ (Live Institutional Servicing on XRPL)

Date: September 17, 2026

To the XRPL Grants Committee and Ripple Ecosystem Leadership,

While the formal submission window for the current grant wave has concluded, we are submitting the attached architectural brief and grant proposal for MortgageOS™ to introduce our live project and initiate dialogue for ongoing or upcoming ecosystem funding rounds.

High Tech Mortgage, Inc. (HTM) has completed and published Version 3.1 of MortgageOS™, a fully functioning, open-source servicing and tokenization layer operating on the XRP Ledger Testnet (using only amendments that are currently live on Mainnet).

Key Architecture & Project Highlights: 1. Native XRPL Primitives: Implements Multi-Purpose Tokens (MPT / XLS-89d) as unalterable digital twins of promissory notes, and utilizes TokenEscrow (XLS-85) for deterministic, date-locked monthly cash-flow settlement. 2. Complete Legal & Regulatory Scaffolding: Fully bifurcates the asset/settlement rail from the legal note layer, maintaining strict compliance with RESPA, TILA, and UCC Articles 3 & 9 while ensuring zero borrower PII touches the public ledger. 3. Proven Leadership & Regional Traction: Backed by 30+ years of licensed California mortgage brokerage experience, former Fannie Mae/SEC data science and AI architecture, and established operational channels across the ASEAN banking corridor via Manila.

- Open-Source Repository (MIT): <https://github.com/vanfwilson/xrpl-mortgage-tokenizing-htm>
- Live Testnet Evidence Report: <https://vanfwilson.github.io/xrpl-mortgage-tokenizing-htm/evidence/v3/>

We invite the committee to review the attached 12-page specification. We would welcome the opportunity to coordinate a brief 15-minute technical demonstration with the RippleX engineering team and discuss how MortgageOS™ can serve as a benchmark for regulated institutional RWA settlement on the XRPL.

Sincerely,

Richard Kent Young
